Serial No. 10/084,381 Amendment dated May 17, 2004 In Reply to Office Action dated January 15, 2004

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims

Claims 1-6 (cancelled).

Claim 7 (new). A method of producing an embossing roller having an embossing surface made of silicone rubber for continuously embossing the surface of a thermoplastic film, the embossing surface having a negative form of a to-be-embossed surface structure:

- a) first an auxiliary roller is produced, which is comprised of a layer of a material at least in the region of its circumferential surface;
 - b) the circumferential surface being smooth;
- c) a laser beam being directed at the circumferential surface:
- d) the laser beam moving relative to the circumferential surface, and being controlled in accordance with a respective surface structure site of a real or imaginary pattern present as data such that the pattern surface

Serial No. 10/084,381 Amendment dated May 17, 2004 In Reply to Office Action dated January 15, 2004

structure is produced as a positive structure in the circumferential surface of the auxiliary roller;

- e) the embossing copy being removed from the circumferential surface of the auxiliary roller, being turned inside out, and with the negative-structured embossing surface facing outwardly and being adhered to a circumferential surface of an embossing roller; and
- f) the material in the region of the circumferential surface of the auxiliary roller being nitrylbutadiene rubber (NbR).

Claim 8 (new). Method according to claim 7, wherein:

a) the embossing surface having a negative form of a to-be-embossed surface structure includes a grain.
